# Non-Parametric Tests 

## PSYC 300B - Lecture 4 <br> Dr. J. Nicol

## The Kruskal-Wallis Test

- Non-parametric alternative to the between-groups ANOVA
- The data are converted ranks to counteract the presence of unusual cases, or when a parametric assumption of the between-groups ANOVA has been violated
- This test assesses the hypothesis that three or more independent groups come from different populations, so it looks for differences between groups of scores that come from different participants (Kruskal \& Wallis, 1952)
- The one assumption for the Kruskal-Wallis test is that each of the treatment conditions must contain at least five scores

## Formula for the Kruskal-Wallis Test

$$
\begin{gathered}
H=\frac{12}{N(N+1)}\left(\sum \frac{R_{i}^{2}}{n_{i}}\right)-3(N+1) \\
\chi_{\text {CRITICAL }}^{2} d f=(\# \text { conditions }-1)
\end{gathered}
$$

| No Soya |  | 1 Soya Meal |  | 4 Soya Meals |  | 7 Soya Meals |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sperm (millions) | Rank | Sperm (millions) | Rank | Sperm (millions) | Rank | Sperm (millions) | Rank |
| 0.35 | 4 | 0.33 | 3 | 0.40 | 6 | 0.31 | 1 |

| 3.40 | 55 | 2.71 | 44 | 2.96 | 49 | 1.34 | 26 |
| 4.52 | 59 | 4.12 | 57 | 3.00 | 50 | 1.49 | 28 |
| 4.72 | 60 | 5.65 | 61 | 3.09 | 52 | 1.50 | 29 |
| 6.90 | 65 | 6.76 | 64 | 3.36 | 54 | 2.09 | 39 |
| 7.58 | 68 | 7.08 | 66 | 4.34 | 58 | 2.70 | 43 |
| 7.78 | 69 | 7.26 | 67 | 5.81 | 62 | 2.75 | 45 |
| 9.62 | 72 | 7.92 | 70 | 5.94 | 63 | 2.83 | 47 |
| 10.05 | 73 | 8.04 | 71 | 10.16 | 74 | 3.07 | 51 |
| 10.32 | 75 | 12.10 | 77 | 10.98 | 76 | 3.28 | 53 |
| 21.08 | 80 | 18.47 | 79 | 18.21 | 78 | 4.11 | 56 |
| Total (R) | 927 |  | 883 |  | 883 |  | 547 |
| Average ( $\bar{\beta}$ ) | 46.35 |  | 44.15 |  | 44.15 |  | 27.35 |

Conduct a hypothesis test $(\alpha=.05)$ to determine if there is a significant difference between the groups. The data violate the assumption of normality within groups

| I | II | III |
| ---: | ---: | ---: |
| 14 | 2 | 26 |
| 3 | 14 | 8 |
| 21 | 9 | 14 |
| 5 | 12 | 19 |
| 16 | 5 | 20 |

Conduct a hypothesis test ( $\alpha=.05$ ) to determine if there is a significant difference between the treatments. The data violate the assumption of homogeneity of variance

| Treatment A | Treatment B | Treatment C |
| :---: | :---: | :---: |
| 10 | 24 | 68 |
| 28 | 27 | 71 |
| 26 | 35 | 57 |
| 39 | 44 | 60 |
| 6 | 58 | 62 |

A physician ranked the health of 25 patients that had been previously categorized by their personality type

| Type-A | Type-B | Type-C |
| :---: | :---: | :---: |
| 2 | 1 | 4 |
| 6 | 3 | 9 |
| 7 | 5 | 14 |
| 10 | 8 | 18 |
| 13 | 11 | 20 |
| 15 | 12 | 22 |
| 19 | 16 | 24 |
| 21 | 17 | 25 |
| 23 |  |  |

Conduct a hypothesis test ( $\alpha=.05$ ) to determine if there is a significant difference in health across the personality types. The data violated the homogeneity of variance assumption

## Friedman's ANOVA

- The non-parametric alternative to the repeated measures ANOVA
- Used for testing differences between more than two conditions when the same group of participants have provided scores for each condition (Friedman, 1937)
- Used when the data are ordinal (i.e., ranks), to counteract the presence of unusual cases, or when the data violate a parametric assumption of a repeatedmeasures ANOVA

Conduct a hypothesis test ( $\alpha=.05$ ) to determine if the diet works (i.e., if participants lose a significant amount of weight)

|  | Weight |  |  |  | Weight |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Start | Month 1 | Month 2 |  | Start (Ranks) | Month 1 (Ranks) | Month 2 (Ranks) |
| Person 1 | 63.75 | 65.38 | 81.34 |  | 1 | 2 | 3 |
| Person 2 | 62.98 | 66.24 | 69.31 |  | 1 | 2 | 3 |
| Person 3 | 65.98 | 67.70 | 77.89 |  | 1 | 2 | 3 |
| Person 4 | 107.27 | 102.72 | 91.33 |  | 3 | 2 | 1 |
| Person 5 | 66.58 | 69.45 | 72.87 |  | 1 | 2 | 3 |
| Person 6 | 120.46 | 119.96 | 114.26 |  | 3 | 2 | 1 |
| Person 7 | 62.01 | 66.09 | 68.01 |  | 1 | 2 | 3 |
| Person 8 | 71.87 | 73.62 | 55.43 |  | 2 | 3 | 1 |
| Person 9 | 83.01 | 75.81 | 71.63 |  | 3 | 2 | 1 |
| Person 10 | 76.62 | 67.66 | 68.60 |  | 3 | 1 | 2 |
|  |  |  |  | $R_{i}$ | 19 | 20 | 21 |
|  |  |  |  | $M_{i}$ | 1.9 | 2.0 | 2.1 |

Participants provided pain relief scores (out of 10, with 10 being the highest) when they took each drug while experiencing a headache on different occasions

| Person | Placebo | Drug A | Drug B | Drug C |
| :---: | :---: | :---: | :---: | :---: |
| A | 3 | 4 | 6 | 7 |
| B | 0 | 3 | 3 | 6 |
| C | 2 | 1 | 4 | 5 |
| D | 0 | 1 | 3 | 4 |
| E | 0 | 1 | 4 | 3 |

Conduct a hypothesis test ( $\alpha=.05$ ) to determine if there is a significant difference in the efficacy of the analgesic drugs

After going on a campus tour of four universities students ranked the schools based on their desire to attend

| Student | VIU | SFU | UVic | UBC |
| :---: | :---: | :---: | :---: | :---: |
| A | 1 | 3 | 2 | 4 |
| B | 1 | 2 | 3 | 4 |
| C | 2 | 3 | 1 | 4 |
| D | 1 | 4 | 2 | 3 |
| E | 2 | 3 | 1 | 4 |
| F | 1 | 4 | 2 | 3 |
| G | 2 | 3 | 1 | 4 |
| H | 1 | 2 | 3 | 4 |

Conduct a hypothesis test ( $\alpha=.05$ ) to determine if there is a significant difference in preferences

Participants ranked how much they liked the pizza from three different pizzerias

| Domino's | Panago | Luigi's |
| :---: | :---: | :---: |
| 3 | 2 | 1 |
| 2 | 1 | 3 |
| 1 | 2 | 3 |
| 1 | 2 | 3 |
| 3 | 1 | 2 |
| 3 | 2 | 1 |
| 2 | 3 | 1 |

Conduct a hypothesis test ( $\alpha=.05$ ) to determine if there is a significant difference in the rankings

| Domino's | Panago | Larry's |
| :---: | :---: | :---: |
| 3 | 2 | 1 |
| 2 | 1 | 3 |
| 1 | 2 | 3 |
| 1 | 2 | 3 |
| 3 | 1 | 2 |
| 3 | 2 | 1 |
| 2 | 3 | 1 |
| $R_{\mathrm{D}}=15$ | $R_{\mathrm{P}}=13$ | $R_{\mathrm{L}}=14$ |
| $M_{\mathrm{D}}=2.14$ | $M_{\mathrm{P}}=1.86$ | $M_{\mathrm{L}}=2.0$ |
